Summary

Healthcare-focused AI and software engineer (M.S. Computer Science – AI, Georgia Tech; graduate Health Informatics, A) who builds and runs production systems for frontline services. Delivered a government office's AI transformation – a reservation and call system that removes 600–800 minutes of visitor waiting time per day, a retrieval-grounded Q&A assistant with evaluation, and an LLM briefing pipeline. Seeking a role in a hospital, research institute or digital-health team in Toronto.

Technical Skills

Languages:	Python, SQL, TypeScript/JavaScript, Bash, MATLAB
Generative AI:	LLM APIs (Claude, OpenAI, DeepSeek), retrieval-augmented generation (RAG), agentic workflows, prompt engineering, LLM evaluation, AI-assisted coding (Claude Code)
Cloud & DevOps:	Google Cloud, Azure, Docker, Kubernetes (CKA), Jenkins CI/CD, Git, Grafana/Prometheus monitoring, Cloudflare Zero Trust
Web & Integrations:	Next.js, FastAPI, REST APIs & webhooks, vcita / Telegram / Google APIs, Azure Power Automate
Analytics & Reporting:	SQL, relational databases, dashboards (Grafana), requirements gathering, financial and operational reporting
Health Informatics:	Graduate Health Informatics coursework (A): clinical data standards (HL7 FHIR), EHR data, privacy and security

Experience

Consulate General of the Republic of Korea in Toronto — Toronto, ON
Software Developer / Administrative Officer — Dec 2025 – Present

- Delivered the consulate's AI transformation (AX) initiatives end to end: a visitor reservation and call system, a renewal of the public website, a civil-affairs Q&A chatbot, and an LLM briefing pipeline
- Built a real-time reservation and call (queue) system for the busiest counters (∼100 visitors/day): QR check-in, lobby wait-list display, and a staff web console to call the next visitor; cuts total visitor waiting time by 600–800 minutes per day and auto-generates the counter statistics report
- Deployed and operate the system on Google Cloud with text-to-speech announcements and integration with vcita scheduling data; restored service over a weekend after an instance-startup failure by cloning from a machine image onto a new host
- Built a civil-affairs Q&A chatbot over the consulate's documents (LLM + retrieval); an evaluation step identified source-data quality as the main driver of answer accuracy and scoped the cleanup needed before public rollout
- Built a Python pipeline that aggregates ∼15 government and news sources, classifies articles by topic, and uses an LLM to draft a one-page brief pushed to staff over Telegram up to 5x/day; cut the morning briefing from ∼2.5 hours to a 20-minute review

dojito.com — Toronto, ON
Founder – Early-stage AI Venture — Jun 2026 – Present

- Built an agentic workflow connecting a Hermes agent to the DeepSeek API to edit websites and run projects from natural-language instructions

Luxoft (Hyundai Motors – Infotainment Platform) — Seongnam, South Korea
DevOps Engineer — Feb 2022 – Dec 2022

- Ran the CI/CD pipeline for a production vehicle-infotainment platform: Jenkins builds, Docker images, and deployments to Kubernetes clusters across 20+ physical and cloud nodes
- Caught and fixed a Kubernetes control-plane misconfiguration before it caused a production outage

CSI Vision — Suwon, South Korea
Software Application Engineer — Mar 2021 – Jul 2021

DP World — Busan, South Korea
Strategy & Planning Associate — Apr 2019 – Jan 2020

- Prepared board-facing financial analysis and monthly reports for the Asia-Pacific regional office; tracked spend against budget across teams

Education & Certifications

Georgia Institute of Technology – M.S. in Computer Science (Artificial Intelligence) — May 2026
Coursework: Machine Learning (A), Intro to Health Informatics (A), Information Security (A), Software Development Process (A), Knowledge-Based AI (A), Deep Learning, ML for Trading (A), AI Ethics & Society

Korea National Open University – B.S. in Computer Science — 2022

Kyung Hee University – B.B.A. in Business Administration — 2017

Certifications: Certified Kubernetes Administrator (CKA), 2023 · TensorFlow Developer Certificate, 2021 · Azure Fundamentals, 2021
